DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 provides for the use of a support material for capillary electrochromatography, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

Claim 1 is rejected under 35 U.S.C. 101 because the claimed recitation of a use, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 2 is rejected under 35 U.S.C. 102(e) as being anticipated by Ullman et al. (USPN 6,103,537).

Ullman discloses a capillary electroseparation assay which comprises of preparing a capillary with specific binding pair (sbp) members. This comprises binding the sbp member to synthetic particles that become localized during capillary electroseparation (abstract; col. 2, lines 17-30; col.5, lines 18-65; col.6, lines 6-30; col.8, lines 27-45; col. 9, lines 9-11; claims 1-10). Ullman discloses the use of fatty acids in a capillary electrochromatography for reverse phase separation (col. 16, lines 1-56).

Claim 2 is rejected under 35 U.S.C. 102(e) as being anticipated by Schure et al. (USPN 6,117,326).

Schure discloses a capillary electrochromatography separation media that comprises binding a fatty acid ligand to the interior of a capillary (col. 1, lines 9-30; col. 3, lines 19-29; col. 4, lines 33-44; col. 4, lines 57-62; col. 5, lines 8-35; col. 6, lines 51-60; claims 1-3).
